Lung Illnesses - Scientists are investigating recent serious lung illness

Putting meth on a piece of tinfoil and holding a heat source underneath will heat the meth and liquify it causing it to smoke. Eat **percocet**, take 15mg each, it's the best you will get from them. Stupid. If you want to get high, crush that shit up, mix it with a glass of water, pour it through a coffee filter, and drink the liquid that comes out, it will be semi-pure **oxycodone**, 95% of the Tylenol will stay in the coffee filter.

Though using **foil** may make **smoking** a particular drug more risky, the majority of dangers are specific to the drug of abuse. **Smoking** any drug can lead to short- and long-term adverse health effects, including addiction and overdose. Some reports claim that **smoking** from aluminum **foil** may result in headaches and a more pronounced cough. **Smoking Percocet on tin foil** Some people will heat **Percocet** on **tin foil** to vaporize the oxycodone, allowing it to be easily inhaled. The problem with this process is that the medication itself is very fragile and doesn't withstand high temperatures - meaning very little oxycodone will actually make it to your nose. The first time we tried **Percocet**, we thought it was a novel idea to break the pills up into chunks and smoke them off a sheet of aluminum **foil**. I'd seen the process done with harder drugs in the movies and thought it would be a cool experience. We held a lighter underneath and inhaled the sweet, burnt-sugary smoke through a pen tube. Cover the top (breast) with **foil**.

Fold over the **foil** that is hanging over the sides of the pan. Meet each end at the top and roll down so that the edges are sealed. (This will prevent the juices from spilling. You put it on tin **foil** (folded in half) and let it slide down with a straw in your mouth and inhale the **smoke**. If it sits in 1 spot it'll burn and not **smoke** right.

**Percocets** no, are not worth it. Please do not try. Apparently I suck at **smoking oxycodone** haha. I tried with a V (which from what I read they just suck to **smoke** period) and last night I tried with a K9. I just grabbed some crappy tin **foil** from my kitchen, broke the pill in half and broke a half in half. I didn't want to waste a large amount. Hold the **foil** at an angle and put the flame under the pill. It will begin to **smoke** and run down the tinfoil, leaving a black trail. 4. Follow the pill closely

with a tube (i.e. a straw, hollow pen, etc.) while inhaling the **smoke**. Well this kitty cat named Ted that my friend once knew about in a pie eating contest Did in fact **smoke** some **Percocet** on tin **foil** and to Ted's surprise, he stated that the taste of the Perc was in fact a little bit like a blue (a watered down effect, like drinking liquor with mostly water) and the Tylenol (APAP, Acetaminophen, whatever you'd like to refer to it as) had NO EFFECT on the taste what-so-ever!. Dr. Daryl Tanski answered. Specializes in Psychiatry. Regardless: Although **smoking Oxycontin** is unhealthy for many other reasons it would be less likely to precipitate psychosis or schizophrenia. Send thanks to the doctor. View 1 more answer. A 37-year-old member asked:.
